Design and User Interface

I like the clean structure of the IQFitness website even though the design is not completed. The buttons and the navbar are basic and not added extra design. However, it is straightforward, with clear sections for profile, workouts, and chat. I think that will make it easy to find what I need.

Usability

The site seems like it will be really easy to use. I like that each feature has its dedicated page. But, I'd need to use the fully functional site to be sure. It would be great to see how easy it is to navigate between sections and to perform tasks like searching for workouts or chatting with the AI.

Functionality

The proposed features sound great. I like the idea of having a personal profile where I can see my details. The IQworkout and IQchat sections are just what make this fitness app very interesting. I can't wait to see them in action.

Home Page and Login

The home page looks welcoming and informative. I appreciate that there's a clear way to log in and out. I hope there will be helpful error messages if I enter my details incorrectly or forget to log out.

Anticipated User Errors

As a user, I sometimes forget to save my changes or enter incorrect details. I hope the site will have ways to help me recover from these mistakes, like prompts to save changes or hints when I can't remember my login details.

Overall Assessment

Based on the prototype, I'm excited about the IQFitness website. It looks like it will be user-friendly and full of useful features. I'm looking forward to seeing the fully functional site. I hope it will be as easy to use and helpful as the prototype suggests.

What we have done after this:

We have addressed the user feedback and as it was in the early stage, we implemented the functionality of searching workouts and the IQWorkout page is fully functioning. We also made the design look better as we have implemented a third-party user interface, Material UI.

Last User Feedback 1

Date: 2023-05-09

Main Page Description:

Feedback: The user suggested that the main page could have a better description.

Login Process:

Feedback: The user finds it bothersome to create a whole new account to log in and suggests implementing a direct Google login option.

Password Restrictions:

Feedback: The user finds password restrictions annoying and requests the freedom to choose any password without forced restrictions.

Search Exercise Page:

Feedback: The user appreciates the detailed and user-friendly nature of the search exercise page.

Editing Exercises Issue:

Feedback: The user encountered an issue where pressing "edit" before saving exercises caused them to disappear.

Explanation and Tutorial:

Feedback: The user suggests providing an explanation or tutorial to help understand the website better.

Adding and Editing Exercises and Plans:

Feedback: The user finds it confusing to use the add and edit exercises and plans functionalities.

Logging Sets with Sliders:

Feedback: The user feels that using sliders to log sets is unnecessary and not the best method for choosing numbers.

Weight Limitation on Sliders:

Feedback: The user expresses dissatisfaction with the weight limitations imposed by the sliders.

CSS Enhancement for Set Management:

Feedback: The user suggests applying CSS enhancements to improve set management.

IQ History:

Feedback: The user appreciates the IQ history feature.

Exercise Name Display:

Feedback: The user believes that displaying instructions for each exercise name is unnecessary and overwhelming.

What we have done after this:

Editing Exercises Issue:

We have fixed the issue that there was when clicking the edit button on the workout page. It's now working and everything else is working nicely.

Weight Limitation on Sliders:

This has been addressed and no longer is an issue.

The other feedbacks that was is to have, we had no time to implement them.

I recently visited your IQFitness website and was impressed by its functionality and performance. Your website's responsive design and easy navigation made it a pleasure to use on various devices. However, I noticed that there are some issues with the user interface. On the home page, some of the letters were not fully visible on smaller devices such as the Galaxy Fold and Samsung Galaxy S8, which made it difficult to read. It would be great if you could improve the visibility of the text on these devices. Additionally, while the IQ history feature worked well and saved my previous workouts, I found that it was possible to enter negative digits in the reps and set input fields. This could lead to errors in the workout log and may confuse users.

I would like also to mention that I found the IQChat feature on your website to be very helpful. It worked perfectly, and I was able to get quick answers to my questions about various exercises and fitness programs.

What we have done after this:

The input number were adjusted and no longer go under 1 when using the button, this is for choosing sets and reps in the saved workout page. Before, as the user pointed it went negative which logically didn't make sense. So it's fixed now.
